The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs, including those that address tuberculosis, AIDS-related disease, trauma, occupational and environmental exposures, breast cancer screening, and maternal-infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach, particularly as an increasing number of academic, government, and non-governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low-resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering, and others. This book will review critical concepts for those interested in managing, establishing, or participating in a medical imaging program for resource-limited environments and diverse cross-cultural contexts undergoing imaging technology adaptation. 344 cases give you the edge you need to ace the USMLE Step 2 CK! Since development assistance is inherently self-interested, a source of soft power, political manipulation and commercial opportunity, its real effectiveness could arguably be judged by the strength of donor influence and not by development impact. Its subjective nature means that its impact on development is often weak, mainly short-term and confined to limited and specific contexts. Aid as influence was prevalent during the Cold War era. The connection is equally

strong in this century's newly bipolar world in which the contest is between western donors led by the USA, and China which is spending hundreds of billions of dollars on infrastructure as a means of influence in the global South. Influence permeates both bilateral and multilateral aid and in parallel with official aid, the rise of global philanthropy has seen it taken up by some of today's billionaires. The response by donors to the growing havoc caused by the three Cs - conflict, climate change and COVID - confirms the main findings of the book, which concludes by outlining what aid without influence would look like. This book draws on the author's 40 years of experience of the aid industry and will be essential reading for development students, practitioners and policy makers alike. Now in full color!
