Published in Cooperation with Sociologists for Women in Society "Women are women and men are men"--this old aphorism is being challenged with ever increasing frequency as social researchers focus on the nature of constructed gender roles. Much of the recent work in this area has appeared in the journal *Gender & Society*, which is the genesis of most of the papers in *The Social Construction of Gender*. In their collection, Lorber and Farrell present the best of current research on how the constructivist approach has been applied to a number of variables, including family structure, the work place, social class, racial ethnic identity, and politics. Theoretical and methodological implications of the constructed nature of gender roles are highlighted, as well as the existing theories of gender deconstruction. The articles and introductory material in this volume reflect feminist social science theory in concrete ways that make the text accessible to scholars, professionals and students at both the undergraduate and graduate levels. This resource is ideal for courses on

feminist studies, sociology of gender, and social theory construction. "One of the strengths of this book is that it provides some conceptual tools that we may not have come across elsewhere. . . . A second strength of the book is the welcome addition of racial/ethnic identity and social class to the issue of gender. . . . All in all, the book is a rich offering of ideas, research, and experience. Each article can stand alone as a valuable contribution; as an anthology, the book insists that we look at the realities of gender." --Smith College Studies in Social Work "A fine collection of current research on one of the major topics of the day. Shows that sociology can be both lively and intellectually illuminating." --R. W. Connell, Macquarie University, Sydney "Psychologists have much to gain from attending to a sociological perspective. The Social Construction of Gender provides that perspective intertwined with an excellent integration of feminist theory and relevant psychological literature. Judith Lorber and Susan Farrell have compiled 18 articles that, like sociology, continually challenge the reader to reflect upon the broad structural issues that pervasively influence construction of reality. . . . well articulated. . . . chapters regarding masculinity consider points of view sometimes overlooked by feminist theorists. . . .provides a solid knowledge base for those feminists in psychology without a sociological background. The Social Construction of Gender was a pleasure to read. Informative, clear, and

concise, it presents a view of women's position in Western society that bridges psychology, sociology, economics, management, anthropology, history, politics, religion, and public policy." --Association for Women in Psychology Newsletter

Big Java: Early Objects, 7th Edition focuses on the essentials of effective learning and is suitable for a two-semester introduction to programming sequence. This text requires no prior programming experience and only a modest amount of high school algebra. Objects and classes from the standard library are used where appropriate in early sections with coverage on object-oriented design starting in Chapter 8. This gradual

approach allows students to use objects throughout their study of the core algorithmic topics, without teaching bad habits that must be un-learned later. The second half covers algorithms and data structures at a level suitable for beginning students. Choosing the enhanced eText format allows students to develop their coding skills using targeted, progressive interactivities designed to integrate with the eText. All sections include built-in activities, open-ended review exercises, programming exercises, and projects to help students practice programming and build confidence. These activities go far beyond simplistic multiple-choice questions and animations. They have been designed to guide students along a learning path for mastering the complexities of programming. Students demonstrate comprehension of programming structures, then practice programming with simple steps in scaffolded settings, and finally write complete, automatically graded programs. The perpetual access VitalSource Enhanced eText, when integrated with your school's learning management system, provides the capability to monitor student progress in VitalSource SCORECenter and track grades for homework or participation. *Enhanced eText and interactive functionality available through select vendors and may require LMS integration approval for SCORECenter. In the newly updated 7th Edition, Chemistry: A Guided Inquiry continues to follow the underlying principles

developed by years of extensive research on how students learn, and draws on testing by those using the POGIL methodology. This text follows the principles of inquiry-based learning and correspondingly emphasizes underlying chemistry concepts and the reasoning behind them. This text provides an approach that follows modern cognitive learning principles by having students learn how to create knowledge based on experimental data and how to test that knowledge.
