Blogging and social networking are inextricably linked in the sense that both contain certain features and certain properties of one another. Both are aimed at creating a wide movement as far as multimedia interaction is concerned. Though it is true that blogs can be regulated and kept very private, the main purpose of them is to reach out to a number of people, to have a medium to voice your opinion. Another similarity is that both these concepts have existed in cyber space for almost a decade now, but in the initial stages both were rather exclusive of one another. Only in the recent times have they been merged, and their similarity in motives truly recognized. Blogging is essentially done to channel your thoughts out on to an online journal. You also want other people to read what you have written. This way, you go about coming in touch with people from all over the world who you would not have otherwise known. Similar is the function of social networking. It is a hub where the young and the hearty flock. The chances of getting an audience at such a platform are high. The origination of the term 'blog' is interesting. It was initially called a 'weblog' meaning a log or a diary or a journal that helps you to record your thoughts on a day to day basis. In that sense it was rather in its primitive stages and did not turn into an instrument for propaganda immediately. This term was later shortened to blog and this is when free blogging services like Blogger became extremely popular. As mentioned earlier, blogging today is not restricted to only maintaining a journal. It has truly become a platform where various kinds of people from all walks of life, whether they have the same ideologies or not, conflate, and discuss the matters they think are important to them. Blogging in the twenty first century has come to become an important tool for advertising for people who wish to market their products online, for politicians who wish to sell their ideologies, and reach out, to the masses. Moreover, creating a blog and maintaining it does not require a fortune. Everybody now has a personal blog and it is all free of cost. Also, one does not need to be a computer engineer or a

graphic or web designer in order to embellish their blog. Do you dream of making your own web page or working as a web developer? The every person's guide to social media... how to use it and what never to do. Are you trying to figure out how to safely use social media but finding yourself struggling? Here's a book specifically designed to help regular people figure out social media platforms. It begins with a chapter about social media basics: how they normally work, why people use them, and general safety tips. It is easy to get confused by the large number of options that are out there so this book breaks down each major network into its own chapter. Chapters are included for: Facebook Snapchat Pinterest LinkedIn Instagram YouTube Twitter Reddit, and Tumblr. Because each social media platform has its their own rules, benefits, and challenges, each chapter gives a summary of the platform and tells the reader why people use it. Next, each chapter has a glossary of terms to explain language and slang that are used. This will help people who are new to social media learn about terminology like subreddits, retweets, and more. If readers decide to use the platform (or already use it and want to learn more), each chapter guides users through a "how-to" of using each platform. This includes the basic functionality, setting up profiles, settings, and odd features that

even current users may not know about. Privacy and safety are also covered, with a platform-specific section devoted to these important issues in each chapter. Two final chapters cover other notable social media platforms that readers might want to know about and archiving tips for saving social media posts and information. This book can help people new to social media, people joining new social media, and people who are already on but want to learn how to better manage and protect their accounts.
