The Practice of Statistics Feb 06 2021 Capstone courses in statistics teach students how to apply their learned skills as if they were professional statisticians. It enables them to tie together ideas and methods from their undergraduate course work to solve problems. Students are presented with a series of 'experiences.' They are required to work in teams to collect data, then individually to solve the problem and present written and oral reports. The 'experiences' expose students to additional challenges they might encounter on the job.

Statistics, 2e utilizes intuitive methods to introduce the fundamental idea of statistical inference. These intuitive methods are enabled through statistical software and are accessible at very early stages of a course. The text also includes the more traditional methods such as t-tests, chi-square tests, etc., but only after students have developed a strong intuitive understanding of inference through randomization methods. The text is designed for use in a one-semester introductory statistics course. The focus throughout is on data analysis and the primary goal is to enable students to effectively collect data, analyze data, and interpret conclusions drawn from data. The text is driven by real data and real applications. Students completing the course should be able to accurately interpret statistical results and to analyze straightforward data sets.
